Spirion Sensitive Data Platform Release Notes

Sensitive Data Platform (SDP)

Version 13.1.0

Release Date: 02.05.2024

Improvements and New Features

- **Improved Parallel Scanning:** A significant evolution of Spirion's Distributed Scanning uses multiple agents to scan a single large-volume target, resulting in trailblazing, faster scans.
- **Real-Time Streaming Results:** Processed results are streamed in real-time, enabling immediate actions on sensitive data.
- **Status Updates:** Monitor the status and health of scans in real-time.
- **Enhanced Encryption:** Generate separate passwords for each search with only the designated agent able to read it.

Bug Fixes:

- [AL-29143](#): Resolved issue of getting an error in the Agent management page due to full log backup.
- [AL-29062](#): Updated the copyright date for Agents (Windows, Mac, Linux).
- [AL-29050](#): Resolved issue where backup credentials were being continuously resent after initial verification.
- [AL-29026](#): Resolved an issue with errors in the files counts of fully discovered locations not being successfully analyzed.
- [AL-29022](#): Resolved an issue where locations did not get scanned when running single agent or distributed scan of SharePoint Online.
- [AL-28098](#): Resolved an issue where back up credentials were shown unencrypted in the EPS log.
- [AL-26949](#): Resolved issue where the Access date older than X days in a playbook could result in an incorrect action
