Spirion Sensitive Data Platform Release Notes

Release date: 08.23.21

The current release is 21.Q3.1. and includes:

- Sensitive Data Platform (SDP)
- SD Watcher
- SD Finder

SDP New Features

- CSV Import
- Data Assets

SDP Enhancements

- Added Translator Service to HealthCheck screen
- All date/time stamps in application have been converted to local time
- Chevrons throughout the application have been standardized
- All Scans list now has an option to view those specific scan results
- All Scans list now includes color coded scan statuses
- All Scans list now shows an error message if a scan failed
- Settings: Classifications can now be exported in bulk
- Settings: Global Quarantine settings updated to include additional Cloud Sources
- Playbook Quarantine settings updated to include additional Cloud Sources that could previously only be controlled at a global level
- Playbook Quarantine settings updated to include specific fields for local file systems by OS instead of a single OS per playbook
- Scan Configuration now allows completion notifications by user as well as manually added email addresses
- Scan Configuration settings for optionally sending locations and matches has been removed
- Agent Tag names size limits has been increased from 50 to 256 characters.
- Consolidated Reports to remove duplicates
- Removed the following reports:
 - Match Counts By Endpoint report
 - Match and Action Summary By Search User report
 - Exchange Match Location By Location and Quantity report
 - DPM Matches By Endpoint report

- Data Retention By Location report
- Cloud Locations By Quantity report
- Actions By Endpoint (Target) report
- Remediation by Data Type report
- Remediation by Tag report

SDP Bug Fixes

- OneDrive Sensitive Data Scans failing to return results
- Help links display a 404 error
- Unassigned Tag is not displaying in Agent and Target Management Tags Tree
- Scan Results - Sorting results on Scan Name after filtering results by Scan Name results in an error
- Automatic Shred not performing on OneDrive
- Cloud Source and Email scans are not always honoring limitations on scope of scan
- Gmail Distributed Scan will only scan with 2 agents regardless of min/max item count settings
- Large Result sets being uploaded from an On Prem agent can cause the agent to show as "Offline" while the upload is processed
- Manual Shred actions not performing on SharePoint
- MongoDB results showing Target Name in Agent Name column
- MongoDB Scans created a Target for each result
- Playbook Quarantine paths could be saved without a value entered
- Read notifications incorrectly show 'Mark as Open' instead of "Mark Unread"
- Redact action not performing on Cloud Sources and Remote Targets
- Scan Results table shows results with a match count of 0 and 1 when filtered for 1 match only
- Sensitive Data Watcher Reports are not always available when Watcher is enabled

SD Watcher Enhancements

- Activity Watcher Agent Refactoring: A streamlined agent for Activity Watcher that can co-exist with the current On-Prem agent for sensitive data scanning.

SD Watcher User Experience (UX) Enhancements

- Deploy (Toggle bar) column is not displaying for all user roles MON User and MON Admin in Incident definition list

SD Watcher Bug Fixes

- Incidents generate a notification when detected
- Incidents generate a notification email when detected

SD Finder New Features

- Request for Erasure
- Configurable Regulations

SD Finder Enhancements

- Removed 'Average Response Time Per Phase Chart' from the SR List Screen
- Added ability to delete custom disclosure and response templated
- Updated Match Review Screen to Display All Matches

SD Finder Bug Fixes

- Bulk Actions button have "Matches" in all lowercase
- Cannot create a New Subject Request if the First and Last Names have numbers in them
- SR Requests with large data returns caused timeout
- Updated CCPA Disclosure Report format
- Updated GDPR Disclosure Report format
