Spirion Sensitive Data Platform Release Notes

Release date: 09.17.21

The current release is Version: 21.Q3.2.82.0 and includes:

- Sensitive Data Platform (SDP)
- SD Watcher
- SD Finder

SDP New Features

- Stop Agent Scan - Added ability to stop agent scans from the Scans list
- Purge Scan Results - Added ability to delete (singly and in bulk) scan results if Sensitive Data Finder is not enabled
- Product Visibility Flags - Removed ability to access areas of the product that are not

SDP Enhancements

- Updated legend for the 'Agent Status' report
- Standardized formatting of 'Top Risk by Data Types' report
- Standardized formatting of 'Agent Status' report
- Updated Navigation buttons in configuration wizards to prevent accidentally exiting the wizard mid configuration.

SDP Bug Fixes

- When using 'Access Date Older than X days' logic in the playbook the results are returned as a 'Discovery Playbook'
- Default logging level for On-Prem agents was incorrectly set to max causing agent scanning performance issues
- Fixed type in Data Asset Inventory > Data Assets > New Data Content
- Resolved Data Asset Inventory > Data Assets 'Categories of Personal Information' mistakenly marked as Required
- Resolved Data Asset Inventory > Data Assets 'New Responsible Party' mistakenly having Title marked as Required
- Resolved Default and 1st created policy not populating in the Policy dropdown list when assigning policies to agents.
- Resolved 'Dictionaty' data type names not being populated if the dictionary was a large file
- Resolved Google Drive Targets having credentials overwritten if a additional Google Drive Targets were created

- Resolved issue where during Scan Configuration 'Targets to be Scanned' incorrectly showed Target Types that could not be scanned by the selected scan type
- Resolved issue where notifications incorrectly incremented by two if a playbook assigned a user by both role and user name
- Resolved issue with Quarantine paths not allowing spaces
- Resolved issue with the Playbook list not populating 'Last Edited' date/time stamp correct if only the Name or Description were modified
- Resolved OneDrive Targets having credentials overwritten if a additional One Drive Targets were created
- Scans of Microsoft Exchange did not always return results if there were duplicate records
