# Spirion Sensitive Data Platform Release Notes

Release date: 11.01.21

The current release is Version: 21.Q4.1.111.0 and includes:

- Sensitive Data Platform (SDP)
- Sensitive Data Watcher (SD Watcher)
- Sensitive Data Finder (SD Finder)

## SDP New Features

- Database Retention: Added ability to set retention schedules for data in the product databases.
- Scan Cloning: Added ability to clone all scan settings under a new name and modify it based on previous scan settings instead of default settings.
- Executive Dashboard: Replaced PowerBI driven dashboard with new dashboard with real time information.
- Playbook Cloning: Added ability to clone all playbook settings under a new name and modify it based on previous playbook settings.
- Results Screen Filtering: Changed filtering system from a side bar to a column heading filtering system.

## SDP Enhancements

- Standardized Watcher and Finder reports to look and feel of the Platform reports.
- Removed duplicate reports (Incident History Reports, Outstanding Incidents Reports, Resolved Incidents Reports, All Subject Request Chart, CCPA Vs GDPR Averages Report, High Level Details Chart, Subject Request Status Chart, Subject Requests by Status).
- Changed all occurrences of 'on premise' to 'on premises' or 'on-prem'.
- Removed errant red dot on the log on screen.
- Added additional messaging around the Forgot Password feature at the log in prompt.
- Updated the Scan Configuration wizard to standardize the look and feel.
- Standardized reports to have a consistent look and feel.
- Moved Targets out of Agents screen and into the Data Asset Inventory screen.
- Updated and standardized Bulk actions interface across the application.
- Added Last Action by Target and Location report.
- Made 'Profile and Preferences' the homepage when selecting Settings instead of just changing the menu.

## SDP Bug Fixes

- PowerBI Reporting sometimes fails to load current data.
- Watcher Dashboard Activity Metrics widget shows duplicate values when filtering for 'day'.
- Watcher Dashboard Activity Metrics widget drill down is blank at the 'hour' and 'day' level.
- Watcher Activity Metrics report sometimes fails to load data.
- Help button on the Watcher Queries page linked to a Using Watcher Dashboard help page.
- Use the Abort Scan option in the Scan list was causing a new scan to be created called "Kill %scanname%".
- Using the Abort Scan option in the Scan list sometimes causes scans to get stuck in 'Abort Processing' if the agent response is missed.
- Replaced project names in notification emails with product names.
- The 'Target match count last search' report was missing a 'Last Found Date/Time' field.
- Updated 'Top Offenders' widget to show 'Target' instead of 'Endpoint'.
- Fixed formatting of the 'Age Profiling' report to fit within the report window.
