Spirion Sensitive Data Platform Release Notes

The current release is 21.Q2.2. and includes:

- Sensitive Data Platform (SDP)
- SD Watcher
- SD Finder

SDP Enhancements

- Ability to go directly to a scan result from the Scan List page.
- Ability to specify or hide columns in the Scan Results screen.
- Added ability to generate a csv export of some reports for download.
- Classifications can now be imported as well as exported.
- Major change to the Agents & Targets page.
- Sensitive Data Summary report updated to only show results from last scan.
- Updated the SSN Anyfind™ to allow additional false positive mitigation.
- Minor user experience improvements.

SDP User Experience (UX) Enhancements

- Added friendly confirmation toast messages for Report Exporting.
- Agents and Targets page revamped.
- Notification bubble is no longer colored red if there are no unread notifications.
- Data Asset Inventory Effective Date must now be less than the End Date.
- Added ability to view Scan Results from the Scans List page.
- Playbook names and Descriptions can now be edited.
- Changed Add New Endpoint Modal to say "Target".
- Login poster is now a static image that does not repeat or get cut depending on screen height.
- Changed tense in 'Add New Gmail Endpoint' dialog for clarity.
- Added the EndpointID to the Target Summary Details for Activity Watcher agents.
- Removed duplicated User management User Count and Role count from displaying under the tabs.
- Added an asterisk in the Scan configuration to the first step to show requirement for the Name field.
- Removed non-configurable History Settings in Sensitive Data Platform Admin settings.
- Standardized Navigation Menu coloring and panel sizes.

- Added a Report Download button on Reports screen.
- Added a Report Download(s) Tab to the Reports screen.
- Corrected the transposed RGB Values in Classification Color Selection when sent to the agent.
- Added a warning when console is accessed with an unsupported browser.
- Added an Import options to the Classifications action button.
- Added ability to customized columns shown in the Scan Results screen.

SDP Bug Fixes

- Fixed Exchange Online Distributed Scans did not complete and send back results.
- Fixed Exchange Online Scans show an the Target name with additional information about the Admin user account in the Target Column of the Scan Results screen.
- Fixed scan results from Cloud Agents with no matches were incorrectly showing a total of 1 match in the Scan Results screen.
- Fixed SQL DB Scans show the Agent name in the Target Being Scanned column of the Scan Results.
- Fixed when configuring a Gmail scan, account names had to be entered in lower-case.

SDP New Known Issues

- Help Links show 404 page not found. Please go to [Sensitive Data Platform User Guide](#).
- Some Playbooks throw an error when attempting to manage them.
- User notification fails when Notify action is not the final action after a decision node.
- MongoDB scans create thousands of Mongo DB Targets.
- Tasks not clearing from Task folder and causing scans to run when none are scheduled.
- Agent Last Heartbeat is not reporting accurate value for Last Heartbeat.
- Scans of O365 Exchange can randomly fail when using Cloud Agents.
- When a user assigns a scan result via Scan playbook to a user and a role when the user maintains that role the notification count will display +1 to the actual available notifications in SDP.
- When a user modifies a Playbook name or description the Last Edited column of the Playbook grid is not populated with the date time of the playbook modification.
- When a user updates a scan playbook name for a scan playbook the 'last used column' of the playbooks grid is populated with the date time for the name / description update.

- PostGres Scans are failing to return results.
- Oracle12 Scans are failing to return results.
- SharePoint Scans are failing to return results with On Prem agents.
- Box Scans are failing to return results with On Prem agents.
- Some RegEx data types are returned as a "Discovery" playbook instead of a Sensitive Data playbook.
- environments are displaying an error when attempting to save SSN Data Type configuration.

- Fixed invalid templates that could be created due to missing validation.
- Fixed On Demand File retrieval not honoring request.
- Fixed template sorting functionality failing to function.
- Fixed unrestricted HTML that could cause a template to break.

SD Finder New Known Issues

- Approved in Another File * is not displaying in the PII Card once same value approved in a file and others are in different files.
- Complete and Generate Report button when selected will bring up the Respond and Complete information instead of going to the Subject Report.
- Comprehensive Report Type only available for CCPA regulation.
- Descriptive Reports types throw an error when selected.
- Disabled 'Disclosure and Response Templates' remain active when processing a subject request.
- Disclosure Information for CCPA and GDPR are not displaying on the Subject Reports.
- Erasure Templates are not a supported Template type.
- GDPR Subject Reports only allow Informative Reports.
- GIF file format not supported in new document viewer.
- JPG file format not supported in new document viewer.
- Mac is not supported by Finder.
- Match statuses are no longer being automatically updated when "approved in another file".

- Multiple match results of the same DataType are incorrectly approved when one match of the DataType is approved.
- On Erasure Requests where the back button returns the user to the results view for Informative Request.
- Regulations Definitions - Last Modified Date not updating after a Regulation has been modified.
- Status colors on Match Approval page are incorrect.
- When selecting a second data type in the new Document Viewer the page is reloaded when approving a match.
- When selecting or creating a Custom Disclosure for a New Custom Regulation you cannot save it - "Response Template must be type of Disclosure".
